                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number is given in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAZ06210) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 36 novel genes and their fragments (nucleic acid sequences: AAZ06219-Z06263; amino acid sequences AAY38386-Y38498) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 36 polynucleotides, based on which tissues they are most highly expressed in the new polynucleotides. Specific uses are described for each of the 36 polynucleotides, based on which tissues they are most highly expressed in the new polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Brewer

                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01810-ABL16175) and the encoded proteins (ABBD7737-ABB72072).
                                                                                                                                                           The sequence data for this patent did not form specification, but was obtained in electronic i at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δÃ
           The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RN derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of
                                                                                                                                             New nucleic acid that is a 5', expressed sequence obtaining cDNAs and genomic DNAs that correspond diagnostic, forensic, gene therapy and chromosome

They are used to cupstream regulatory sequences and to design expression and secret:

This DNA encodes a mature ceramidase from Pseudomonas aeruginosa. Ceramidase can be produced by standard recombinant methodology. Ceramidase converts ceramide to sphingosine and a fatty acid, causes, or exacerbates, atopic dermatitis. The ceramidase gene, polypeptide, derived oligonucleotides and ceramidase-specific antibodies are used to prevent and/or treat atopic dermatitis. The gene and the polypeptide can be used
                                                                                              Claim 1;

Ceramidase can be produced by standard recombinant methodology.

Ceramidase converts ceramide to sphingosine and a fatty acid, causes, or exacerbates, atopic dermatitis. The ceramidase gene, polypeptide, derived oligonucleotides and ceramidase-specific antibodies are used to prevent and/or treat atopic dermatitis. The gene and the polypeptide can be used as reagents for lipid engineering and for analyzing the structure and

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DEFINITION All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)
http://ftp.genome.washington.edu/RM/RepeatMasker.html Submitted (06-JUN-2002) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Jun 6, 2002 this sequence version replaced gi:21313862. Rogov, P., Roman, J., Rosetti, M., Roy, A., Santos, R., Schauer, S., Severy, P., Spencer, B., Stange-Thomann, N., Stojanovic, N., Starauss, N., Subramanian, A., Talamas, J., Tesfaye, S., Thodore, J., Topham, K., Travers, M., Travis, N., Trigilio, J., Vassiliev, H., Viel, R., Vo, A., Wilson, B., Wu, X., Wyman, D., Ye, W.J., Young, G., Zainoun, J., Zembek, L., Zimmer, A. and Zody, M. O'Neil,D., Oliver,J., Peterson,K., Phunkhang;P., Pierre,N., Pollara,V., Raymond,C., Retta,R., Rieback,M., Riley,R., Rise,C., Meneus,L., Mihova,T., Mlenga,V., Murphy,T., Naylor,J., Nguye Nicol,R., Norbu,C., Norman,C.H., O'Connor,T., O'Donnell,P., Johnson,R., Jones,C., Kamat,A., Karatas,A., Kells,C., Lamazares,R., Landers,T., Lehoczky,J., Levine,R., Lind Liu,G., MacLean,C., Macdonald,P., Major,J., Marquis,N. Direct Submission Grand-Pierre, N., Hagos, B., Horton, L., Hulme, W., Iliev, I. Galagan,J., Gardyna,S., Ginde,S., Gord,S., Goyette,M., Graham,L., Matthews, C., McCarthy, M., McEwan, P., consists of 17 contigs. Gaps between the contigs are represented as runs of N. The order of the $\rm p$: NOTE: This is a 'working draft' sequence. It currently Sequencing vector: Plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of read Assembly program: Phrap; version 0.960731 Insert size: 183000; agarose-fp Insert size: 182501; sum-of-contigs Quality coverage: 6.7 in Q20 bases; agarose-fp Quality coverage: 6.7 in Q20 bases; sum-of-contigs Consensus quality: 178331 bases at least Q40 Consensus quality: 181207 bases at least Q30 Consensus quality: 182003 bases at least Q20 Center project Information Center project name: L23776 Center clone name: 346_D_12 Contact: sequence_submissions@genome.wi.mit.edu Web site: http://www-seq.wi.mit.edu Center: Whitehead Institute/ MIT Center for Genome Research Center code: WIBR -- Genome Center McKernan, K., Meldrim, J., of reads .C., LaRocque, K., Lindblad-Toh, K., Nguyen, C.,

COMMENT JOURNAL

the accession number will be preserved.

1 1186: contig of 1186 bp in This sequence will be replaced by the finished sequence as soon as it is available of the gaps between provided by the submittor is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have 20676 13879 7958: contig of 1075 bp in 7959 8058: gap of 100 bp 10756: contig of 2738 bp in 10796: contig of 2738 bp in 10797 10896: gap of 100 bp 897 13878: contig of 2982 bp in 179 13978: gap of 2610 2510 1187 1286: 979 15988: contig of 2010 bp 989 16088: gap of 100 bp 989 20675: contig of 4587 bp 976 20775: gap of 100 bp 976 25506: contig of 4731 bp 1 97 25606: gap of 100 hm 1 4300: gap o 2509: contig of 1223 bp in 2609: gap of 100 hm 4200: contig of 2483 bp in of 100 br contig of 1591 bp in of 100 bp bp in bp.in bp in in 'n length length length length length length length length length
